2016 ANNUAL REPORT

Highlighting IAF's role in program
delivery and project support for industry

The Investment Agriculture Foundation (IAF) was established in 1996. We are an industry-led, not-for-profit organization.

Our Mission is to assist British Columbia's producers, processors, agri-businesses and rural communities to develop solutions and seize opportunities.

Funding is available to help the agriculture and agrifood industry in British Columbia enhance competitiveness, profitability and sustainability.

Information about our mandate, vision, core values and available funding can be found in the **Who We Are** section of our website iafbc.ca

20 YEARS AND STILL GROWING!

2016 MARKED A SIGNIFICANT MILESTONE FOR BC AGRICULTURE AND IAF, AS WE CELEBRATED OUR 20TH ANNIVERSARY IN ABBOTSFORD LAST APRIL. ALONG WITH INDUSTRY AND GOVERNMENT, IAF DIRECTORS AND STAFF REFLECTED ON A RICH COLLABORATION THAT HAS FUELED AGRI-FOOD INDUSTRY GROWTH, COMPETITIVENESS AND SUSTAINABILITY ACROSS THE PROVINCE.

IAF's formation in 1996 proved a pivotal turning point in BC's agricultural evolution, with industry gaining unprecedented management of federal adaptation funding. Starting with the Canadian Adaptation and Rural Development Fund and closing with the Canadian Agricultural and Adaptation Program, the adaptation era represents more than \$21 million of project investments in BC alone.

While dozens of funding programs have come and gone through IAF's tenure, each has indelibly contributed to BC's agricultural legacy. But don't take our word for it – in 2016, IAF commissioned R.A. Malatest & Associates to complete an impact study to assess the economic,

environmental and social impacts of government investments delivered by IAF and the results speak for themselves.

For funding recipients through the Canada-BC Agri-Innovation Program, federal-provincial funding allowed many to pursue more thorough research than would have been otherwise possible. Not only did project support result in new product lines for some, but several credit the funding for contributing to broader social and environmental impacts.

Michael Gilbert, founder of Semios-Bio Technologies Inc. (Semios), is one of many who has witnessed multiple benefits unfold through his project. Considered a pioneer of precision

farming in BC, Semios offers advanced technological services that combines data management science with agricultural best management practices. Using Innovation funding, Gilbert was able to implement and enhance a cost-effective application of pheromones for codling moth mating disruption. Not only has this allowed orchardists to minimize their use of inputs and reduce environmental impacts, but the Semios system also protects biodiversity by only applying species-specific pheromones that do not affect beneficial insects.

"We've had many cranberry researchers from all over North America, standing there with envy in their eyes wishing they had a centre like this to work at," recalls Jack Brown, BCCMC chair.

But the benefits don't stop there. According to Gilbert, funding to develop the new technology also allowed him to significantly grow his enterprise in terms of managed land and workforce.

"The Semios team grew from five employees to thirty over the course of the project," says Gilbert, adding that they have since expanded from managing only a couple hundred acres to nearly 13,000, comprising nearly 200 new clients.

Enhancing production and sharing best management practices is a cause shared by the BC Cranberry Marketing Commission (BCCMC). Thanks to government funding delivered by IAF, the BCCMC embarked on a five-year project to develop the BC Cranberry Research Farm, the first research facility of its kind in Canada and the fourth in North America. While the Farm was created with the aim of increasing

cranberry production within Canada, it has drawn considerable interest – even longing – from all over the continent.

"We've had many cranberry researchers from all over North America, standing there with envy in their eyes wishing they had a centre like this to work at," recalls Jack Brown, BCCMC chair.

In addition to providing BC growers with information to improve their plantings, researchers are also exploring the impacts of cranberry production on greenhouse gases, insect populations and soil and groundwater.

For Brian and Corin Mullins, owners of HapiFoods Group Inc., funding through the BC Buy Local Program and the BC Agrifood and Seafood Export Program was indispensable in securing their now iconic Holy Crap cereal in both local and international markets.

Thanks to in-store demos that served almost 7,000 samplers, Holy Crap sales soared from four bags to 25 bags per day in BC chain stores like Whole Foods Market, Overwaitea, Save on Foods, Choices Market and London Drugs, as well as at smaller independent grocery stores in BC.

HapiFoods then moved into the international arena, focusing on US and Asian markets, including Japan, China and Korea. Export funding enabled them to participate in 17 tradeshows that have created international brand awareness and generated international trade potential for the burgeoning enterprise.

"We would probably have done 10 to 15 percent of what we did if we were on our own," Corin estimates. "Export and Buy Local funding was critical to our company's growth by providing us with the means to ramp up production and marketing."

"We would probably have done 10 to 15 percent of what we did if we were on our own," Corin estimates. "Export and Buy Local funding was critical to our company's growth by providing us with the means to ramp up production and marketing."

" The support through the Investment Agriculture Foundation is wonderful for small companies like us. It's allowed us to build consumer preference, demand, and sales for Holy Crap products in BC and to participate in world trade shows that would not be possible without funding." CORIN MULLINS, CEO AND CO-FOUNDER, HAPIFOODS GROUP INC.

These are just some of the many stories that illustrate the very tangible impacts that these investments have made over the years.

Since its inception, IAF has delivered \$192 million in government funding to more than 1,700 projects that are helping to stimulate sizable growth for farm, food and processing businesses across the province. In terms of economic impact, the Malatest study found these investments leverage \$1.85 for every dollar, totaling \$355 million!

Although funding programs and priorities have changed over the past two decades, the focus of IAF remains steadfast – to support industry through each challenge and

opportunity, building a stronger, more adaptive community and securing BC's place as a leader in agricultural production.

FUNDING: \$140,000 PROVIDED BY THE GOVERNMENTS OF CANADA AND BRITISH COLUMBIA THROUGH THE CANADA-BC AGRI-INNOVATION PROGRAM UNDER GROWING FORWARD 2, A FEDERAL-PROVINCIAL-TERRITORIAL INITIATIVE (INN018); \$218,133 PROVIDED BY THE GOVERNMENTS OF CANADA AND BRITISH COLUMBIA (A0678.01, A0678.02); \$44,326 PROVIDED BY THE GOVERNMENTS OF CANADA AND BRITISH COLUMBIA THROUGH THE BC AGRIFOOD & SEAFOOD EXPORT PROGRAM UNDER GROWING FORWARD 2, A FEDERAL-PROVINCIAL-TERRITORIAL INITIATIVE, AND THE BC GOVERNMENT'S BUY LOCAL PROGRAM (BL151, EX017, EX017.02, EX069, EX069.02, EX203, EX317, EX347).

MESSAGE FROM THE DIRECTORS AND STAFF

Dear Friends of the Foundation,

Every year at IAF we are presented with new challenges, opportunities and rewards, and in 2016 we also had a special cause to celebrate as we reached our 20th anniversary. We are honoured that many of you have taken this journey with us and very proud of the connections, relationships and investments made with our industry partners, clients and government. Thank you for your trust and support.

Over the years IAF has delivered dozens of government-funded programs. Many of these programs are of general application to primary agriculture production and value-added food processing. Other programs have been sector and/or issue specific. During this time we have refined our capacity and been diligent in meeting the highest level of client service standards. The decisions made by the board and the government dollars we spend represent direct investment in some of the highest priorities and challenges to our industry.

The Poultry Biosecurity Initiative, for instance, has worked for the past decade to address the threat of Avian Influenza.

Their work has been nationally recognized and set a new standard for emergency planning and response. Find out about the latest developments on page 18.

We also continued to work closely with industry to address environmental and wildlife issues that impact agriculture through the Agri-Food Environment Initiative. Read how orchardists in the Okanagan are implementing new technology that will allow growers to safely and humanely repel birds on page 24.

Equally rewarding are the investments that stimulate real growth and opportunities for farm, food and processing businesses across the province. IAF has played an important role in advancing innovation, research and food safety for our industry through a variety of federal and provincial funding programs.

2016 marked the fourth year of our delivery of *Growing Forward 2* programming. Through the Canada-BC Agri-Innovation Program, we have been working to deliver over \$13 million towards projects that support late-stage research and development, pilots and demonstration projects that follow along the innovation continuum toward commercialization. From small-scale agri-businesses to industry associations and post-secondary institutions, this funding is continuing to change the way we produce, process and protect our food for a variety of sectors throughout BC.

Thanks to Innovation funding, a Vancouver company was able to develop technology that would enable northern growers to attain year-long production while significantly reducing their energy requirements and increasing yields. Read more on page 10.

Every year we are excited to see new clients from both the primary production and processing sectors expand their markets, and 2016 was no exception. For BC companies like HapiFoods Group Inc., funding through the BC Agrifood and Seafood Export Program was

instrumental in building consumer preference, demand and sales for their Holy Crap products throughout the world. In total, 120 Export projects were approved for close to \$1.8 million in funding last year.

Bringing it back to home, the BC Government's Buy Local Program has continued to boost domestic sales for BC's agriculture, food, beverage and seafood sectors. In 2016, we were proud to commit more than \$3.2 million towards over 95 new projects to enhance local marketing efforts to increase consumer demand and sales of BC agri-foods. Find out how a single marketing campaign has helped a local fishery increase their customer base by more than 60 per cent on page 18.

During our 2016 tour of the Pemberton Valley, directors and staff saw first-hand the impact that IAF's investments are having for food processors and producers alike. Nonna Pia's Gourmet Sauces shared their family's story of inspiration and growth in local and international markets. Caveman Grocer, Whistler' Farmer's Market, and Pemberton Distillery demonstrated some of the market opportunities that local businesses are creating to increase demand for local food production. Shaw Creek Farm also spoke to the Pemberton Valley's long history as a seed potato growing area, and some of the ways that the industry is adapting to ensure its future success.

This year on the IAF board, we said goodbye to former vice-chair Bar Hayre, who has been an invaluable asset to our industry during his two terms. We offer our deepest appreciation to Bar and wish him the very best of luck.

We would also like to express our gratitude to the industry specialists and program staff at the Governments of Canada and British Columbia, who provide their expertise,

experience and ideas to both industry and IAF through their input on applications for funding support and assistance with knowledge transfer.

I am honoured to serve the agricultural sector with my fellow directors, and I would like to thank the board and staff for their dedication and hard work. I am especially grateful for the extraordinary efforts by our executive committee during the last year. 2016 was exceptionally busy, calling executive members to the adjudication table for 12 different meetings. Each of these meetings represent many hours of preparation by directors before we collectively review applications, and I feel fortunate to have such dedicated colleagues willing to rise to the task.

As our agrifood and seafood sectors work towards the goal of \$15 billion in revenue per year by 2020, we are working to build new relationships and enhance existing partnerships to help make that happen.

We are looking forward to whatever the next 20 years may bring.

Ken Bates
Chair

Peter Donkers
Executive Director

A MESSAGE FROM BC'S AGRICULTURE MINISTER

On behalf of the Government of British Columbia, I would like to thank the Investment Agriculture Foundation for another year of dedication and leadership in supporting the BC agrifood and seafood industry across the province.

As we work towards our goal of reaching \$15 billion in agrifood and seafood revenue by 2020, partnerships with organizations such as IAF continue to support the agriculture sector as a job-creator and an integral part of BC's economy, keeping us on the forefront of market competitiveness and innovation. As well, IAF is helping provide a deeper connection between BC food, BC communities and the people that live in them by leading the application review process for the BC government's \$250,000 Grow Local program.

Looking ahead to 2017, it is going to be a very exciting and eventful year for the agriculture industry. Funding administered by IAF, on behalf of British Columbia and Canada, through the Canada-BC Agri-Innovation Program, the BC Agrifood and Seafood Export Program, and the \$8-million Buy Local program will continue to boost producer and processor market success and growth and increase sales of locally grown and processed agrifood and seafood products within the province. This support means British Columbians are receiving fresh, healthy local foods all year round.

Congratulations and all the best to IAF and its board of directors. Your leadership is appreciated and we look forward to another successful year in 2017.

Norm Letnick
Minister of Agriculture

A MESSAGE FROM THE FEDERAL MINISTER OF AGRICULTURE

On behalf of the Government of Canada, I'd like to thank the Investment Agriculture Foundation of British Columbia for all that you do to support farmers, food processors, agri-businesses, and rural communities across the province. With over two

decades of dedication to the sector, IAF continues to deliver programs that foster sustainable growth, from bee and dairy health, to environmentally-friendly pest control. You're also helping many diverse and exciting new agri-based business ventures get into the marketplace.

The Government of Canada is focussed on key priorities to keep the sector strong, from trade, to innovation, to sustainability. We've gained access to China and Japan for BC cherries and peppers respectively, and in the fall I led a major trade mission to China along with a large group from BC's agriculture and food industry.

We're working hard to ratify the Comprehensive Economic and Trade Agreement with the European Union, which will virtually eliminate tariffs on our agricultural exports to the world's largest market for food.

The demand for food in the world is growing, particularly in many Asian countries where their growing middle class are looking for the high quality food Canada can provide. I want Canadian producers to meet that demand, which will in turn create good jobs in Canada.

As Canada celebrates our 150th anniversary of Confederation, we can look ahead to even greater success.

Once again, thank you and I wish you all the best for 2017.

Lawrence MacAulay
Minister of Agriculture and Agri-Food

CROPS & VALUE ADDED

FROM LUSCIOUS BERRIES TO CRISP CUCUMBERS, CRUNCHY QUINOA TO ROBUST WINES AND MOUTH-WATERING DESSERTS, BC PRODUCERS AND PROCESSORS COMMAND AN UNPARALLELED REPUTATION WHEN IT COMES TO QUALITY EATS AND DELECTABLE TREATS.

Whether organic or conventional, fresh or processed, IAF delivers funding designed to help both established and emerging sectors thrive. In 2016, over 160 crop-related projects were approved for more than \$5.2 million. In addition to these new projects, the BC Fruit Growers Association continued to receive funding for projects under the Tree Fruit Replant Program.

New Technology Sheds New Light on BC Crops

While a love of local has come to define BC culture, not all British Columbians can fully embrace the locavore movement. With limited sunlight in northern regions and lack of farmland in urban centers, many BC producers struggle to meet the growing demand for fresh, local food year round.

Eager to fill the gap and help growers reduce greenhouse-related energy costs, QuantoTech Solutions Ltd. undertook a project to develop energy-saving LED fixtures that would enable year-long local production. Unlike existing LED models developed primarily for large commercial greenhouses, QuantoTech wanted to serve the significant number of local, northern and emerging BC growers needing more tailored designs. Two years later, these growers now have the ability to achieve higher yields using half the electricity as conventional lighting!

“By using next generation LED lighting technology, growers of leafy greens, micro-greens and culinary herbs can reduce their energy requirements for production by 30-40 percent and increase yields by up to 25 percent,” explains QuantoTech founder, Alycia van der Gracht, adding the new technology also decreases production time.

Growers like Aaron Quesnel have witnessed the benefits of the new technology firsthand.

While Quesnel had previously experimented with LED lighting at Sky Harvest, his East Vancouver greenhouse, he was forced to revert to fluorescent tube lighting when the quality of his produce declined. As a project participant however, he discovered the QuantoTech Q200 LED light panel was the perfect fit for Sky Harvest.

“This is the only LED light that has been able to grow a variety of crops with the same quality my customers have come to expect,” says Quesnel, who is working on deploying additional units.

Van der Gracht expects more growers will follow suit as they learn the abundant benefits LED technology offers, particularly in the north.

“ By using next generation LED lighting technology, growers of leafy greens, micro-greens and culinary herbs can reduce their energy requirements for production by 30-40 percent and increase yields by up to 25 percent.”

"The generous funding and support through IAF has allowed QuantoTech Solutions to show northern growers, and year-round indoor growers, the benefits of LED lighting by alleviating the operational risks that would have previously held these growers back. Not only were we able to prove that electrical costs could be reduced by 30-40%, but also that crop quality would not be compromised and could even be improved. We look forward to further serving these markets."

ALYCIA VAN DER GRACHT, FOUNDER, QUANTOTECH SOLUTIONS LTD.

"Northern conditions used to mean the growing season was limited to a single summer when there was adequate light, with residents often relying on imported produce the rest of the year," says van der Gracht.

"Now communities can access year-round local crops and growers can potentially maximize outputs with reduced input costs."

The Quantotech team is now focused on a new partnership with the College of New Caledonia to help facilitate technology adoption in northern communities.

FUNDING: \$35,397 PROVIDED BY THE GOVERNMENTS OF CANADA AND BRITISH COLUMBIA THROUGH THE CANADA-BC AGRI-INNOVATION PROGRAM UNDER GROWING FORWARD 2, A FEDERAL-PROVINCIAL-TERRITORIAL INITIATIVE. (INN189)

LIVESTOCK, POULTRY & AQUACULTURE + VALUE ADDED

MILK, HONEY, CHEESE AND MORE...THANKS TO THE DEDICATION AND PASSION OF BC'S RANCHERS, FARMERS AND FISHERS, BRITISH COLUMBIANS CAN ENJOY A RICH VARIETY OF QUALITY MEAT, SEAFOOD AND DAIRY PRODUCTS. PART OF KEEPING THESE SECTORS THRIVING IS THE SUPPORT OF INITIATIVES DESIGNED TO HELP PRODUCERS PROACTIVELY DEAL WITH CHALLENGES.

The provincial Livestock Waste Tissue Initiative continues to be active in preparing the meat industry and local communities to dispose of specified risk material and other abattoir waste in the event of a future mass carcass disposal event. In 2016, projects were approved to identify suitable sites for emergency carcass burial in the Regional District of East Kootenay, as well as GIS study updates for 11 regional districts.

The Poultry Biosecurity and Emergency Response Initiative also continued to offer project support. Development of an Avian Influenza (AI) Surveillance Program is ongoing, while an AI Industry Workshop was held last year to help industry prepare for the 2016 AI season. Workshop participants were able to review lessons learned from the 2014/15 outbreak, as well as challenges and responses to AI in a global context. While the Poultry

Industry Advisory Management Committee wrapped up at the end of 2016, remaining funds for the initiative are still available for AI projects that meet the strategic plan goals.

IAF also offers a variety of other funding programs that benefit these sectors more broadly. In 2016, almost 70 new projects were approved for funding for more than \$2.6 million.

Buy Local Project Reels in Customers

Skipper Otto's Community Supported Fishery has a story to tell behind every fillet. And thanks to their Buy Local funded campaign, "Get to know your fisherman," the BC company has hooked an avid audience.

Skipper Otto connects wild, local, sustainable, fair-trade BC seafood directly to consumers through an

annual subscription service, offering customers complete transparency about which BC fisherman caught their seafood and where.

But as the adage goes, the medium is the message, and Skipper Otto decided the medium needed a little work.

With the help of the BC Government's Buy Local Program, Skipper Otto launched an ambitious marketing campaign for their 2016 season, creating a strong, recognizable brand that clearly distinguishes their products from out-of-province competition in the crowded seafood market.

According to Director of Operations Chris Kantowicz, his team's enhanced ability to tell their stories lies at the heart of their project's success.

"With the right tools and training, we've become experts at telling the stories around our BC seafood products and the fishermen who

"People want to support their local BC fishermen," Kantowicz emphasizes. "That's evident from our continuously growing membership and the level of online engagement we enjoy – but they need to know how, and that's where Buy Local benefits us all."

"Skipper Otto's Community Supported Fishery used Buy Local funding to ensure that all of its BC seafood clearly tells the story about the fisherman who caught it right on each label. We successfully grew our membership through amplifying our stories through new channels thanks to this support." CHRIS KANTOWICZ, DIRECTOR OF OPERATIONS, SKIPPER OTTO'S COMMUNITY SUPPORTED FISHERY.

catch them," says Kantowicz, adding that even product labels are now devoted to identifying fishermen and BC locations, with each fisherman's face and story on all products sold.

And it's clear from the numbers that they've caught the public's attention – by the end of the 2016 sales season their new customer base in BC had risen by more than 60 percent from the previous season, while their Facebook, Twitter and Instagram followers continue to multiply.

Kantowicz believes that telling the story of one BC fisherman on every label and sharing these stories with an online community has captivated the public and allowed Skipper Otto to reach new groups of consumers eager for this type of information.

"People want to support their local BC fishermen," he emphasizes.

"That's evident from our continuously growing membership and the level of online engagement we enjoy – but they need to know how, and that's where Buy Local benefits us all."

FUNDING: \$19,986 THROUGH THE BC GOVERNMENT'S BUY LOCAL PROGRAM. (BL169)

PAN AGRICULTURE

NATURALLY THERE ARE MANY AGRICULTURAL INITIATIVES AND PROJECTS THAT RESIST CATEGORIZATION. SOME CROSS MULTIPLE COMMODITY GROUPS, WHILE OTHERS ARE DESIGNED TO BROADLY ASSIST THE ENTIRE AGRICULTURE AND PROCESSING SECTORS. IN 2016, MORE THAN 60 NEW PROJECTS WERE APPROVED FOR OVER \$2.2 MILLION.

Helping food producers and processors increase the use of BC agrifoods in the domestic marketplace through the BC Government's Buy Local Program, or access international opportunities through the BC Agrifood and Seafood Export Program, are also IAF priorities that cross multiple sectors.

Helping the agri-food industry address environmental issues and enhance sustainability also continued as a priority in 2016, with more than \$360,000 in *Growing Forward 2* funding going towards seven new climate change adaptation projects under the BC Agriculture and Food Climate Action Initiative.

Similarly, project support through the Agri-Food Environment Initiative continued to help industry address environmental and wildlife challenges that impact agriculture. Eleven new projects were approved in 2016, including a demonstration project to teach stewardship practices for

wildlife and species at risk, as well as one aimed at implementing and evaluating a starling trapping program in the Central Fraser Valley.

Bye Bye Birdie

For fruit growers across the globe, birds are a common bane, particularly for those seeking a quiet, humane and cost-effective mitigation strategy. Starlings are especially unsavory interlopers as they not only spread disease but often destroy an entire crop, forcing growers to walk away and leave everything on the tree.

Fortunately for BC growers, Coral Beach Farms decided that a new solution was needed – or at least new to BC. With funding from the Canada-BC Agri-Innovation Program delivered through IAF's Agri-Food Environment Initiative, Coral Beach became the first grower in the province to test the Agrilaser Autonomic Program at its Lake Country orchard.

Recently launched in The Netherlands, the Agrilaser has been successfully used in European orchards and offers a host of benefits according to Coral Beach Hort Manager, Gayle Krahn.

"The Agrilaser is clean, silent and safe for humans, birds and the environment," explains Krahn, who ran the two-year trial that investigated bird activity and damage in both laser-treated and non-laser treated orchards.

While livestock such as cows, pigs and chickens will ignore the laser beam, birds view it as a physical danger and keep their distance.

Configured through remote control and offering a maximum range of 2,000 meters, users can install and control settings from their laptops and are able to define up to ten different areas in which birds are repelled. Coral Beach programmed their laser to sweep just above the trees and only operate during specific times of the day. In less

"We want to make sure we share a solution that will benefit all tree fruit, grape and berry growers," says Krahn. "I have confidence in the lasers and I think by tweaking the program we can have even greater success."

"There are many innovative ideas out there on new and better ways of farming. Without support it is sometimes difficult to try new technology or methods making it difficult to stay on the cutting edge of farming. With the help of IAF, Coral Beach Farms was able to experiment with lasers for bird control. This funding emboldened us to test the technology as well as hire a summer student to help monitor bird activity. After using the laser on a trial basis, we felt confident enough to buy more units for our farms. Without initial funding to test this technology we probably would not have tried it. These support programs are essential to growing forward in agriculture and staying competitive in the market." GAYLE KRAHN, HORTICULTURE/VERNON MANAGER, CORAL BEACH FARMS LTD.

than a minute, the laser covered the 135-acre orchard and led to a dramatic shift in their bird population.

Over time, however, they discovered that while the lasers proved a consistent deterrent on certain species such as starlings and sparrows, crows and magpies eventually became resistant as they adapted to the laser's pattern. A potential solution is to change the laser's pattern every two weeks in hopes of continuously confusing the birds and keeping them repelled. Users also have the option to set the laser to change patterns part-way through the day to cause even more confusion.

During the trial Coral Beach also compared the laser to more conventional bird control methods like falconry and noise makers.

"Noise makers are exactly that – they make noise and as a result bother neighbors and the surrounding community," laments Krahn, adding that birds also tend to get used to the noise and eventually ignore it.

While falconry may work for smaller farmers, the higher number of falconers needed for a larger operation is too costly for most.

For now Coral Beach continues to experiment with broader-based monitoring and programming, adding more Agrilaser units to its other orchards and sharing information with growers (many of whom are reluctant to invest in technology until it has been tested locally).

"We want to make sure we share a solution that will benefit all tree fruit, grape and berry growers," says Krahn. "I have confidence in the lasers and I think by tweaking the program we can have even greater success."

FUNDING: \$12,700 COMMITTED BY THE GOVERNMENTS OF CANADA AND BRITISH COLUMBIA THROUGH THE CANADA-BC AGRI-INNOVATION PROGRAM UNDER GROWING FORWARD 2, A FEDERAL-PROVINCIAL-TERRITORIAL INITIATIVE. (INN214AE)

BOARD INITIATIVES

NOT ALL ISSUES THAT AFFECT AGRICULTURE CAN BE RESOLVED WITH EXISTING INDUSTRY RESOURCES. IN CASES LIKE THESE, IAF OFTEN PARTNERS WITH INDUSTRY ON A STRATEGIC INITIATIVE OR PROJECT OR EVEN ASSUMES THE LEAD ON ADDRESSING ISSUES OF HIGH PRIORITY.

With the backing of industry, the board is also empowered to develop specialized programs to address specific priorities which fall within IAF's mandate and funding principles, such as the Small Projects and Agricultural Area Planning programs.

Small Projects Program

The Small Projects Program provides an expedited process for industry groups to access up to \$10,000 for projects valued at \$30,000 or less and lasting up to one year. Nearly 15 new projects were approved in 2016, totalling a commitment of more than \$90,000.

Funding can be provided through any of the programs that IAF delivers and is based on eligibility, demonstrated need and industry support. With no set intake deadlines, applications can be submitted at any time, but clients are encouraged to apply at least 30 days before a project starts.

Agricultural Area Planning Program

The Agricultural Area Planning Program offers funding to local governments that partner with the agricultural community to develop a local, shared vision for the future of agriculture and improve the viability of farming in municipalities and regional districts around BC.

Since 1999, over 55 projects aimed at creating or updating agricultural area plans, strategies or land use inventories have been approved for funding including five new projects in 2016.

The Regional District of North Okanagan and the City of West Kelowna completed projects in 2016, bringing the number of plans completed with funding support to 40.

Kamloops Plans Ahead

When the City of Kamloops completed its first Agricultural

Area Plan in 2013, there was an abundance of action items that lay before it. One of the most pressing was the development of an Agriculture Water Demand Model that would increase understanding of agricultural water use and bolster BC's commitment under the Living Water Strategy to reserve water for farmland.

A water demand model is a management planning tool that calculates current and future agricultural water demands for areas within the Agricultural Land Reserve and areas zoned for agriculture within the City. Crop type, irrigation system type, soil texture and historical climate data are all used to calculate current water demands and to project future demands using various climate change scenarios.

With federal and provincial funding delivered through IAF's Agricultural Area Planning Program, the City was

"The water demand model provides a better understanding of the opportunities and issues related to crop irrigation," says Locke.

" Our Water Demand Model generated significant interest from the public and put the City of Kamloops in a position to make more informed decisions to promote agriculture within the local economy and ensure appropriate stewardship of our land. Funding through IAF was vital to this project."

MARVIN KWIATKOWSKI, DIRECTOR, DEVELOPMENT AND ENGINEERING SERVICES DEPARTMENT FOR THE CITY OF KAMLOOPS.

able to complete the water demand modelling exercise in 2016.

For Jason Locke, Community Planner Supervisor with the City of Kamloops, having a resource in place that clarifies water use issues is vital for any long-term agricultural planning.

"The water demand model provides a better understanding of the opportunities and issues related to crop irrigation," says Locke. "This information can be used by the local agricultural industry to improve agricultural productivity and potentially see more land available for production...from a sustainability perspective, the City sees the model as an important tool to encourage water conservation and enhance local food production."

Included in the comprehensive report are climate change scenarios developed by the University of British Columbia and the Summerland Research and Development Centre. Among other predictions is an increase in agricultural water demand

due to warmer and longer summers, as well as lower precipitation during summer months.

Using three climate change models, researchers were able to determine that in an extreme climate scenario, there is potential for the annual water demand to increase by up to 18 percent than that experienced in historically dry years.

But it's not all doom and gloom. Researchers also discovered an opportunity for significant water reduction by converting irrigation systems to a higher efficiency for some crops. Drip systems, for instance, can be used for all fruit and vegetable crops, as well as some other horticultural crops.

Marvin Kwiatkowski, Director for the Development and Engineering Services Department, is thrilled the City now has a blueprint to facilitate future research projects.

"Access to current and accurate data will allow the Kamloops agricultural industry to put additional land under

cultivation," Kwiatkowski predicts. "The benefits will include increased food production in the region and associated economic benefits, as well as increased food security for local residents."

As part of the project, the City was also able to complete a Land Use Inventory which gives administrators a better understanding of current agricultural land use and production, as well as an online soils database that offers the agricultural community accurate mapping of potential agricultural land and capability.

An Agricultural Toolkit, including the Agriculture Water Demand Model report, soils mapping and Land Use Inventory is available at www.kamloops.ca.
